

Firmic Platform User Manual

How to Use Firmic From A to Z

1. Platform Overview

Firmic is an AI-powered business infrastructure platform that helps users launch, manage, and operate a company from one dashboard.

With Firmic, a user can:

- Create a company workspace
 - Rent a virtual office
 - Manage company documents
 - Create and track operational tasks
 - Monitor compliance through Hermes
 - Manage company operations through Sonny AI
 - View messages and notifications
 - Generate company reports
 - Connect integrations
 - Monitor billing and infrastructure
-

2. Starting the Platform

Before using Firmic locally, start both servers.

Start Backend

Open terminal:

```
cd Backend
uvicorn main:app --reload
```

Backend should run at:

```
http://127.0.0.1:8000
```

Check:

```
http://127.0.0.1:8000/health
```

Expected result:

```
{"status": "ok"}
```

Start Frontend

Open another terminal:

```
cd frontend  
npm run dev
```

Frontend should run at:

```
http://localhost:3000
```

3. Create a Company

Go to:

```
/create-company
```

Steps:

1. Enter company name
2. Select industry
3. Select jurisdiction
4. Select plan
5. Click **Create Company**

After creation, Firmic saves the company as the active company and redirects the user to the Company Control Center.

4. View All Companies

Go to:

/companies

Here users can:

- View all companies
- Search companies
- Filter by status
- Open a company
- Set a company as active

Click **Open** to enter the Company Control Center.

Click **Set Active** to make that company the current workspace.

5. Rent a Virtual Office

Go to:

/virtual-offices

Steps:

1. Browse available offices
2. Choose an office
3. Click **Rent Office**
4. Confirm success message

After renting, the office disappears from available listings and becomes connected to the active company.

6. View My Office

Go to:

/my-office

This page shows the active company's office details:

- Office code
- Location
- Monthly rental

- Mailbox status
- VoIP status
- Office plan
- AI workforce capacity

This confirms that the company has active infrastructure.

7. Company Control Center

Go to:

/company

This is the main company workspace.

It shows:

- Company name
- Company ID
- Office status
- Documents
- Tasks
- Sonny summary
- Hermes score
- Company health
- Quick actions

Use this page to understand the company's full operational status.

8. Upload and Manage Documents

Go to:

/documents

Users can:

- View documents
- Create new document records
- Set document type
- Set status

- Delete documents
- Search and filter documents

Common document types:

- Trade License
- KYB
- Contract
- Invoice
- Compliance document

Hermes uses these documents to calculate compliance readiness.

9. Manage Tasks

Go to:

/tasks

Users can:

- Create tasks
- Complete tasks
- Delete tasks
- Track pending and completed work

Tasks feed into:

- Sonny AI
- Company Control Center
- Hermes readiness
- Reports

Example task:

Upload KYB documents

10. Use Sonny AI

Go to:

```
/sonny
```

Sonny is the AI operations center.

Sonny can:

- Read company tasks
- Read company documents
- Show progress
- Summarize company activity
- Create tasks from commands

Example command:

```
Create task: Upload KYB documents
```

Sonny will create a real task and update the task list.

11. Use Hermes Compliance

Go to:

```
/hermes
```

Hermes is the compliance monitoring engine.

Hermes checks:

- Trade license status
- KYB documents
- Contracts
- Tasks
- Compliance score
- Risk level
- Open alerts

Hermes updates dynamically based on company documents and tasks.

12. Communications Center

Go to:

/messages

This page acts as a unified inbox.

It includes:

- VoIP messages
- CRM updates
- Mailbox notifications
- Sonny alerts
- Hermes alerts
- Meeting room updates

Users can view selected messages and take actions such as:

- Create task
- Reply
- Assign to AI
- Archive

13. Reports

Go to:

/reports

Users can generate:

- Company Health Report
- Compliance Report
- AI Workforce Report
- Financial Report
- Investor Demo Report
- Hub71 Readiness Report

In the current MVP, reports generate downloadable `.txt` files.

Future version will support PDF reports.

14. Integrations

Go to:

`/integrations`

Users can connect tools such as:

- OpenAI
- Microsoft 365
- Zoom
- HubSpot
- Slack
- Google Workspace
- QuickBooks
- Salesforce

Click **Connect** to activate an integration.

Connected integrations show as healthy in the Integration Health panel.

15. Billing and Invoices

Go to:

`/billing`

This page shows:

- Monthly subscription summary
 - Office rental
 - AI workforce cost
 - Mailbox cost
 - VoIP cost
 - CRM cost
 - Microsoft 365 cost
 - Taxes
 - Total monthly spend
-

16. AI Workforce

Go to:

/ai-workforce

Users can manage AI employees such as:

- Receptionist AI
- Sales AI
- Support AI
- Executive Assistant AI
- Finance AI
- Legal AI
- Marketing AI

The AI workforce supports company operations from day one.

17. Meeting Rooms

Go to:

/meeting-rooms

Users can:

- View available rooms
- Select a meeting room
- Choose date
- Choose time
- Choose duration
- Confirm booking

Meeting rooms include Zoom connectivity.

18. Mailbox

Go to:

/mailbox

Users can manage business mail:

- Letters
- Packages
- Bank notices
- Government mail

Actions include:

- Scan mail
- Forward mail
- Download PDF
- Archive

19. VoIP and Calls

Go to:

/voip-calls

Users can view:

- Business number
- Call activity
- Answered calls
- Missed calls
- AI receptionist activity

20. CRM

Go to:

/crm

The CRM page helps manage:

- Leads

- Deals
 - Sales pipeline
 - Customer follow-ups
 - AI sales actions
-

21. Microsoft 365

Go to:

/microsoft-365

This page represents:

- Business email
 - Office apps
 - Teams
 - Cloud storage
 - Microsoft licenses
-

22. Recommended User Flow

For a complete Firmic demo, follow this order:

1. Create Company
 2. Open Companies page
 3. Set active company
 4. Rent Virtual Office
 5. Open My Office
 6. Upload Documents
 7. Create Tasks
 8. Open Sonny AI
 9. Ask Sonny to create a task
 10. Open Hermes
 11. Check compliance score
 12. Open Reports
 13. Generate report
 14. Download report
 15. Open Integrations
 16. Connect tools
 17. Open Dashboard
 18. Show complete business infrastructure
-

23. Demo Script

A simple demo flow:

```
We start by creating a company inside Firmic.  
  
Once the company is created, we rent a virtual office.  
  
Firmic then connects that office to the company workspace.  
  
From there, we upload documents, create tasks, and monitor operations.  
  
Sonny AI reads the company's tasks and documents and helps operate the business.  
  
Hermes monitors compliance readiness and identifies missing documents or risks.  
  
Reports generate business intelligence outputs for founders, operators, and  
investors.  
  
Firmic brings together virtual office infrastructure, AI workforce, compliance,  
documents, communications, and reporting in one business operating system.
```

24. Current MVP Limitations

The current MVP includes working frontend flows and backend connections for key features.

Some features are still MVP-level and will be improved later:

- Real PDF report generation
 - Real authentication
 - Real payment processing
 - Real mailbox forwarding
 - Real VoIP provider connection
 - Real Microsoft 365 provisioning
 - Real third-party integrations
 - Production PostgreSQL database
 - Full multi-tenant security
-

25. Final Summary

Firmic allows users to launch and operate a company using virtual office infrastructure and AI-powered operations.

The platform connects:

- Company setup
- Virtual offices
- Documents
- Tasks
- Sonny AI
- Hermes compliance
- Reports
- Integrations
- Communications
- Billing

Firmic is designed to become the operating system for AI-native companies.
